

ABSTRACT OF THE DISCLOSURE

A method for producing a potentiated pharmaceutical product for use in man, animals or plants. The method uses a potentiation medium which has an increased content of free and/or bonded amino acids.

1. A method for producing a potentiated pharmaceutical product for use in man, animals or plants, comprising the steps of: (a) providing a pharmaceutical product; (b) providing a potentiation medium having an increased content of free and/or bonded amino acids; and (c) combining the pharmaceutical product with the potentiation medium.
